

The Glabellar Complex

Muscle reference: corrugator · procerus · depressor supercilii

Matched expression: maximal frown

Key structures

Corrugator supercilii: draws the brow medially and inferiorly.

Procerus: contributes to inferior medial brow movement and transverse nasal-root lines.

Depressor supercilii: may contribute to medial brow depression.

Assessment

Observe the frown pattern, muscle bulk, brow position, asymmetry, orbital anatomy, and whether the concern is dynamic, static, or mixed. Do not reduce assessment to a fixed five-dot map.
